OUR GOAL

US\$ 900.000

> Research and Applied Knowledge Center:

This project aims to develop a comprehensive approach to increase local capacities for stakeholders and decision-makers for long-term research, conservation and educational programs for the monitoring and protection of the Yasuní National Park.

> Community Outreach:

This project aim to build and strengthen a network with various villages to share experiences and information to cover conservation concerns as well as management strategies for sustainable use of resources or alternative sources of income that are compatible with the nature of the Yasuní Biosphere Reserve.
